

## South Central Electric Association

# Choose Renewable Energy for Your Home or Business

**You can easily purchase renewable energy from South Central Electric Association. South Central Electric has Renewable Energy Credits (RECs) available for purchase to offset your current electric usage with 100% renewable energy.**

The electricity you receive will still be the same reliable, affordable energy you have always received from South Central Electric. By participating in this program, you will be supporting current and future renewable projects.

Your home or business will be joining hundreds of other people from across the nation who are supporting renewable energy. By purchasing REC's, your business could add value to your products or services, promote future regional renewable projects and showcase your support for renewable energy sources.

### ***What is a Renewable Energy Credit (REC)?***

- 1MWh (megawatt hour/1,000kWh's) produced by a renewable energy source equals 1 REC.
- REC's are also called Green Tags.
- REC's represent the valuable renewable attributes of wind energy.

### ***How much does it cost?***

\$1 per MWh (\$.001/kWh). If you use 1,000 kWh's in a month, it would cost \$1 that month to be 100% renewable. Use only 600 kWh's and the cost is only \$0.60.

### ***How does it work?***

Each month you pay an additional \$.001/kWh for each kWh you purchased from South Central Electric. At the end of the year South Central Electric totals all the kWh's participating members purchased and retires REC's to cover those kWh's.

*For example: If you purchase 9,600 kWh's during the year, your cost for the program would be \$9.60. REC's would be retired in South Central Electric's Renewable program to cover 100% of your electric usage.*

### ***Do I need to purchase any special equipment?***

No. South Central Electric will continue to fulfill all your electric needs and you can enjoy the benefits of renewable energy.
